(a) storage modulus
representative profile
piecewise quadratic (5 seg.)
GHM $N = 5$
ADF $N = 5$
Re G [MPa]
Frequency [Hz]
(b) loss modulus
loss implied by Re G
(causal relaxation model)
Im G [MPa]
Frequency [Hz]
(c) minimized objective
GHM
ADF
convex bound, relaxation models
Optimal objective: r.m.s. relative residual [%]
Model order N
(d) tabulated metric
GHM, Re G
GHM, Im G
ADF, Re G
ADF, Im G
Component-wise max relative error [%]
Model order N
